MOTORS

DRIVE ASSIST VIVAX

Description

It is the lightest electric motor available on the market. It can be mounted in the saddle tube. Discreet and hidden, it preserves the appearance of the bicycle. No other engine combines sports cycling with comfort and electronic support as the VivaxAssist does. It delivers more than 200 watts to the crankshaft when it is lit with a click, and stops when you turn it off with another click. Without the power of the engine the bike equipped with Vivax does not offer any type of mechanical resistance.

Weight

Low weight kit of 1,8 kg (including the battery), the bike can be used normally.

Position

The motor is elegantly hidden in the saddle tube, so the gravity center is preserved as also the weight stability.

Size

The motor is 220 mm long and has a diameter of 30,9 or 31.6 + CPU, ideal for its assembly in the saddle tube. The battery can be hidden in the saddle bag "botelleto optional", so the system turns invisible, keeping the aspect of a bicycle without motor.

Kit options

Vivax can be set in a bicycle transforming it into an e-bike, and giving the bike more versatility to ride normally or with motor help.

Features of the Vivax Drive	
A)	<i>Straight saddle tube and inner diameter 30.9 / 31.6 mm, without interference or deformation of the vertical tube.</i>
B)	<i>Tube geometric center coincident with the geometric center of the pedalier</i>
C)	<i>Minimum height of the saddle to the cyclist crocht of 630 mm.</i>
D)	<i>Tansmission Shimano Hollowtech+ PedalierBSA.</i>
POWER	200 W.
BATTERY DURATION	60' (200W100%) 80' (100W 50%)
WEIGHT	1.8 KG.
Mounting options	
Unit Vivax Assist	2.697€
